

Weekly Project Progress Report

Fill out this sheet each week and upload it to your GitHub repository.

Team Name / Group No.	Group 2 (G2)
Project Title / Topic	Speech Emotion Classification using RAVDESS
Domain / Client	Customer Support / CallConnect Speech
GitHub Repository Link	https://github.com/kenishadennis06-create/Group-2-Speech-Recognition-Emotion-Classification-
Report for Week Ending	22 September 2026

Team Members & Roles

Roll Number	Student Name (Leader First)	Role
241BCADA59	Kamal	Data Engineer(Team Leader)
241BCADA57	Amisha Rashmi casba	Data Analyst
241BCADA05	Lichitha k.b	Data Scientist
241BCADA37	Rida	ML Engineer
241BCADA35	Navin	Analytics Engineer
241BCADA31	Kenisha	BI Developer

Weekly Tasks

S.No	Task Owner (Name)	Task Description	Status (Done / In Progress)
1	Kamal	Collected and organized the RAVDESS dataset. Standardized the audio files by converting them to mono, resampling and normalizing the amplitude. Built the feature extraction process and started with MFCC features. Later helped create the expanded feature dataset.	Done

		Also separated training and testing data properly to avoid data leakage between actors.	
2	Amisha Rashmi casba	Performed EDA on the processed audio features. Studied the emotion distribution, feature distributions, unusual values, correlations and relationships between features. Compared MFCC, Mel-spectrogram, Chroma, ZCR and RMS features using visualizations and statistics.	Done
3	Lichitha k.b	Tested different ML models, mainly Random Forest and SVM, using the expanded feature set. Compared accuracy, Macro F1, precision, recall and confusion matrices. Used actor-independent validation. Tuned the SVM using different C, gamma and kernel values. The enhanced Random Forest model reached around 50% accuracy.	In Progress
4	Rida/Navin	Helped the team investigate the low model accuracy and discussed different ways to improve the results. inference pipeline and model integration.	In Progress

5	Kenisha	Helped Kamal with the Data Engineering work. .	Done
---	---------	--	------

Team Collaboration & Problems Faced

How teammates helped each other this week: (Briefly state who helped whom)	Kamal and Kenisha worked together on the Data Engineering tasks. Amisha worked on EDA using the processed features while Lichita worked on model testing and tuning. Rida and Navin helped investigate the low accuracy. Rida and Navin are reviewing the requirements for their respective downstream stages and coordinating the project workflow. The whole team discussed and tested different approaches to improve the model results.
Current blockers or problems faced: (What is stuck or needs faculty help?)	The model accuracy is currently around 50%, which is lower than expected. The team is testing different features and model settings to improve the results. Model experiments and improvements are still in progress.
